Education

Dwarkadas J. Sanghvi College of Engineering — Mumbai, India

B.Tech in Electronics and Telecommunication, Honors in AI/ML (CGPA - 7.6) — *May 2023 – May 2027*

Experience

Tenet — October 2026 – Current

Product Engineering Intern — *Texas, USA | Remote*

- Developing backend services and product features for an AI-powered voice-agent platform using Go and TypeScript, contributing to the inference proxy, control-plane APIs, and the React-based review studio.
- Automating base-model integration workflows, streamlining model configuration, registration, and inference routing so new models can be onboarded, evaluated in simulation, and served with minimal manual setup.
- Working with Redis, PostgreSQL (Neon), Cloudflare R2, and Google Cloud Secret Manager across isolated development and production environments to support reliable, environment-specific model and adapter serving.

Sugamaya Governance LLP — July 2026 – October 2026

Fullstack Developer Intern — *Malad West, Mumbai | On-Site*

- Built and deployed full-stack web applications using Next.js, React, TypeScript, Node.js, and PostgreSQL.
- Implemented APIs, Prisma schemas, authentication flows, notification queues, and Neon/Supabase migrations.
- Integrated Redis, Appwrite, Cloudflare R2, Better Auth, Razorpay, and Calendly; deployed via Vercel and Render.

Tech Mahindra — June 2025 – July 2025

IT Intern — *Powai, Mumbai | Hybrid*

- Engineered workflow in ServiceNow under ITIL4, eliminating manual intervention in enterprise ticketing systems.
- Streamlined enterprise incident management and performed root-cause analysis to improve SLA compliance.

Projects

Mergo | *Next.js, TypeScript, Supabase, Clerk, Tiptap, PostgreSQL* | Live

- Engineered a conflict-free real-time collaborative text editor implementing the RGA CRDT algorithm from scratch in TypeScript, guaranteeing mathematical convergence across concurrent editors with no last-write-wins or conflict dialogs.
- Architected a per-character operation log persisted to Supabase Postgres and broadcast via Supabase Realtime, with idempotent remote op application ensuring byte-identical documents across all clients.
- Built point-in-time version history with snapshot restoration, Realtime Presence for live collaborator tracking, and a multi-tenant model with role-aware dashboards distinguishing owned vs shared documents.

TruePath | *Next.js, TypeScript, BullMQ, Redis, Appwrite, Prisma, PostgreSQL* | Live

- Architected an Event-Sourced Financial Ledger & CQRS application, decoupling write commands from read models to maintain an immutable, audit-ready financial domain stream.
- Implemented a BullMQ & Redis queue pipeline for background projection processing with a synchronous fallback, and request idempotency protection against duplicate transactions.

Technical Skills

Languages: Go, TypeScript, JavaScript, Python, Java, C++, SQL

Frameworks & Libraries: Next.js, React, React Native, Node.js, Express.js, FastAPI, Socket.IO, Three.js, R3F

Databases & ORMs: PostgreSQL, Redis, MongoDB, MySQL, SQLite, Prisma, Drizzle, Neon, Supabase

Cloud & Infrastructure: Google Cloud, AWS, Cloudflare R2, Docker, Vercel, Render, Firebase, Upstash, Appwrite

APIs & Integrations: OpenAI, Anthropic, MCP, Better Auth, Google OAuth, Razorpay, Resend

Developer Tools: Git, GitHub, pnpm, Bun, Vite, Linux, gcloud CLI, Postman, DBeaver, Claude Code, Cursor
